

● Series Seed — Investment Opportunity

Amazon's **Gateway** to 7.9M Offline SMEs in Africa.

BizHub digitizes and verifies local commerce — enabling Amazon to scale logistics, AWS, and marketplace penetration across 290+ secondary towns.

7.9M+

\$33M

SERVICEABLE MARKET

⚡ THE TIMING

Why Now Is the Perfect Moment

Four converging mega-trends make this the once-in-a-generation opportunity to digitize local commerce across Africa.

93%

Mobile Internet Penetration
Kenya leads Africa in smartphone adoption. 93% of internet users access via mobile — and they're searching for local businesses every day.

\$23B

Digital Economy Boom
Kenya's digital economy is projected to reach \$23B by 2027. Mobile money (M-Pesa) has already proven Kenyans embrace digital solutions.

90%

SMEs Are Invisible Online
Despite the digital boom, 90% of local SMEs have zero online presence. The gap between digital demand and business supply is massive.

0

Full-Stack Competitors
While Google Maps and Facebook exist, no platform combines their features in a hyperlocal, verification-first model. A bespoke solution built specifically for the African trust-gap.

\$4.1T

Africa's Consumer Market by 2030
McKinsey projects Africa's consumer and business spending will reach \$4.1 trillion. Kenya is the gateway. BizHub is the infrastructure.

THE PROBLEM

The Local Commerce Crisis

While Nairobi saturates with digital services, 290+ towns are left behind. The result: lost revenue, broken trust, and invisible businesses.

Invisible Businesses
90% of local SMEs have no online presence. Customers can't find them without physically walking the streets.
7.1M unseen

Rampant Scam Epidemic
Online shoppers are getting scammed daily by fake listings. Trust in digital commerce is collapsing in smaller towns.
68% fear fraud

Unaffordable Marketing
Billboards cost KES 200K+/month. Radio is KES 50K+. Small legitimate shops can't compete with loud, well-funded scammers.
KES 0 budget

Broken Discovery
Customers buy from far away because they don't know a legit shop is just 500 meters away. Local money leaves local communities.
70% leave town

Zero Customer Data
Businesses operate blindly. They have no idea what customers search for, what competitors charge, or when demand peaks.
0 insights

No Trust Infrastructure
No verification system exists. Customers can't distinguish legitimate businesses from fly-by-night operations.
0 verified

“I lost KES 15,000 to a Facebook seller in Thika. I later found out there was a verified shop selling the same item 200 meters from my house.”

— Real customer feedback, Thika focus group 2025

THE SOLUTION

BizHub: The Trust Layer for Local Commerce

A hyperlocal "super app" for every town — powered by AI, built on verification, designed for the 290+ underserved towns in Kenya.

One App. Every Town. Total Trust.

BizHub is more than a directory. It's a complete digital ecosystem that physically verifies businesses, powers AI-driven search, enables flash deals, tracks visits, and drives daily engagement — creating a self-reinforcing trust economy.

AI-POWERED

VERIFIED

HYPERLOCAL

PWA + WEB

Customer Obsession at the Last Mile

Town-specific content. Thika users see Thika businesses, deals, and events. Each town — its own hub.

Physical Verification

We visit and verify every business. "Verified Badge" = 100% real shop. Zero scams.

AI Search Engine

Natural language: "Best plumber open now?" GPT-4 analyzes all businesses and responds instantly.

Proof of Visit

Customers share selfies/receipts. Creates authentic social proof + referral tracking.

Flash Deals Engine

"Happy Hour" for retail. Time-limited offers with urgency counters drive instant foot traffic.

Merchant Analytics

"Google Analytics" for shops. Views, clicks, customer origins — data that was never available before.

AI & INTELLIGENCE

Built-In Artificial Intelligence

Not bolted on. Not planned. Already built and deployed. Our AI features set us apart from every competitor on the continent.

🧠 "Ask BizHub" — Conversational AI Search

Customers type natural questions like "Best restaurant open right now?" or "Affordable plumber near Juja?" — and our Amazon Bedrock / Claude 3 powered engine instantly searches all verified businesses, ranks them by rating, and presents personalized answers with direct links.

Status: Live in production. Amazon Bedrock integrated (Claude 3). Context-aware with 50+ business profiles per query.

TRUST & VERIFICATION

The Trust Engine That Powers Everything

Trust is our moat. Every feature we build reinforces trust. Every interaction creates more social proof. This is the network effect that makes BizHub unbeatable.

100% Verified. Zero Scams. Total Confidence.

The Scalable Verification Pipeline: We seed initial trust by physically verifying the first anchor businesses in a town. Phase 2 transitions to our highly scalable, automated **hybrid model**: cross-referencing KRA PINs, M-Pesa Till numbers, and requiring a live video walk-through via WhatsApp. This drops verification cost by 80% while preserving the trust moat.

INNOVATION

The Reverse Marketplace & Growth Engine

Three proprietary systems that no competitor has: Smart Leads, Local Partnerships, and Micro-Influencer tracking. Already built and deployed.

💡 Smart Leads — "Reverse Market"

Instead of customers searching for businesses, customers **broadcast their needs** and businesses compete to respond. This flips the marketplace and creates high-intent leads.

Local Partnerships

Businesses form cross-promotional partnerships. A restaurant partners with event venues. A salon partners with a spa. BizHub facilitates these connections, creating a business network effect. **Database table and dashboard built.**

Micro-Influencer Tracking

Every Proof of Visit post generates a unique share link. When that link drives views, the poster earns "impact" points. This gamifies word-of-mouth and turns every customer into a micro-promoter. **Referral tracking live.**

Live Pulse (Flash Deals)

Time-limited deals with urgency counters. Businesses clear stock, drive foot traffic during slow hours. Animated "LIVE PULSE" badges create FOMO. **Full deal engine with expiry tracking deployed.**

Community Events Hub

Central calendar for everything happening in town — from church fundraisers to club nights. Event cards with date, time, location, pricing, and attendee counts. Drives weekend traffic. **Events platform live with filters.**

THE PRODUCT

20+ Features. All Built. All Deployed.

While our core value is uniquely driven by **AI Conversational Search** and the **Smart Leads Reverse Marketplace**, we've built the complete supporting infrastructure to capture the local commerce stack — all live in production.

Smart Directory
Rich profiles with photos, hours, GPS, WhatsApp

AI Search
Amazon Bedrock powered conversational business discovery

AI Reviews
Auto-generated review summaries & sentiment tags

Recommendations
Personalized "For You" business suggestions

Smart Alerts
Email notifications for matching new businesses

Flash Deals
Time-limited offers with live countdown

Events Hub
Community calendar with RSVP & filtering

Proof of Visit
Photo verification with share & referral links

Smart Leads
Reverse marketplace — customers broadcast needs

Partnerships
Cross-promotion between local businesses

Analytics
Views, clicks, customer data for merchants

Compare Tool
Side-by-side business comparison with hours

Interactive Map
Leaflet-powered GPS map with business pins

Reviews System
Star ratings, photo reviews, owner responses

Favorites
Save and manage bookmarked businesses

Notifications
Real-time notification bell & system

Invite System
User, business, and admin invite management

Admin Panel
Complete business & user management dashboard

PWA Ready
Installable mobile app with offline support

WhatsApp Chat
One-click direct messaging with pre-fill

Built for Scale. Multi-Tenant Architecture.

Single codebase built on AWS infrastructure. We scale to new towns in clicks, not months, leveraging Amazon's robust cloud resilience.

AWS Amplify

TypeScript

Amazon RDS

Amazon DynamoDB

Amazon Bedrock

💰 REVENUE

Diversified Revenue Model

We make money when businesses grow. Five revenue streams ensure stability and high lifetime value per merchant.

Premium Subscription

KES 2,500/mo

Verified Badge, analytics dashboard, priority support, higher listing rank, custom profile

Promoted Listings

Pay-Per-View

Top-of-search placement, homepage banners, featured cards for maximum visibility

Deal Commissions

Performance Fee

Small fee for each high-value flash deal claimed. Aligned incentives — we earn when they earn

Smart Leads Premium

KES 1,500/mo

Priority access to broadcast requests. Businesses pay to get customer leads before competitors

Data & Insights

Enterprise

Aggregated market data for brands, NGOs, and government agencies. Consumer behavior analytics

Unit Economics — Mature Town (Year 3 Model)

Target merchants in mature town	300
Premium MRR (KES 2,500 × 45 merchants)	KES 112,500
Ad, Deal & Smart Leads MRR	KES 105,000
Proj. Annual Revenue / Mature Town	KES 2.6M

Margin Profile

The KES 2,500/mo subscription comfortably covers the linearly scaling OpenAI API compute costs for AI Search, yielding an estimated **85% Gross Margin**.

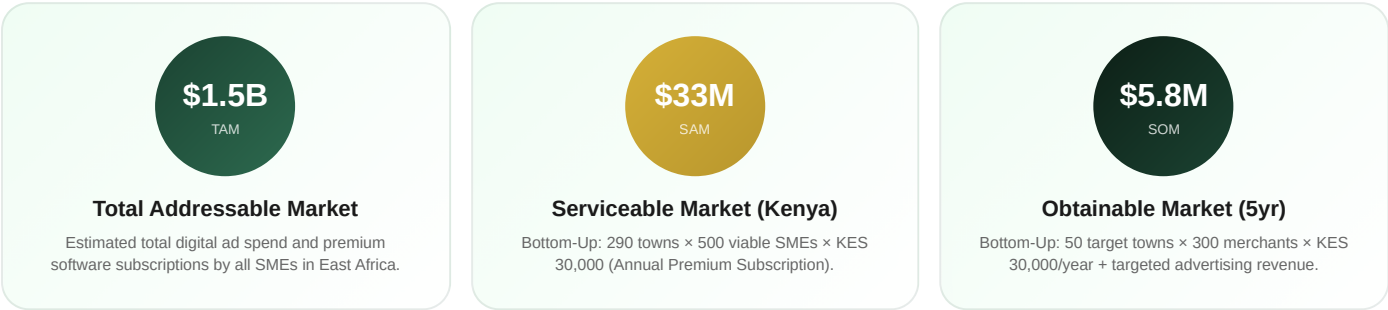

CAC vs LTV

Estimated CAC per premium merchant: **KES 5,000**. Payback period is exactly 2 months. A highly sustainable acquisition engine.

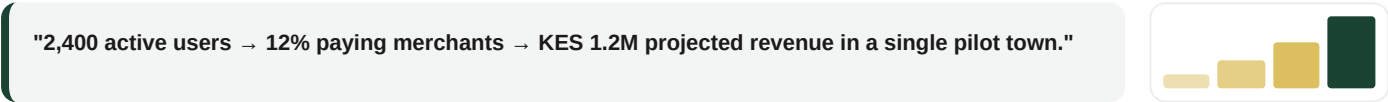

📍 MARKET OPPORTUNITY

Massive Market. Zero Competition.

The hyperlocal business discovery market in Kenya is uncontested. We're capturing it town by town.

📈 Proven Traction & Usage (Thika Pilot)

🗺️ The "Town-by-Town" Strategy

We don't launch nationwide. We capture one town, dominate, reach profitability, and use that cash flow to launch the next. Capital-efficient growth.

 **Strategic Amazon Hook**

BizHub can become Amazon's entry point into Africa's offline commerce network. We provide the infrastructure layer to power expansion into local markets—enabling seamless integration with Amazon logistics, scaling AWS adoption, and onboarding local SMEs to the global Amazon ecosystem.

 **Network Effects Moat**

More verified businesses → more customers → more reviews → more trust → more businesses join. Self-reinforcing flywheel that competitors cannot replicate overnight.

 **Hyperlocal Data Moat**

Granular town-level data on consumer behavior, business performance, and market gaps. This intelligence becomes exponentially more valuable with scale.

 **Physical Verification Moat**

We've built the ground team and processes to physically verify businesses. This operational infrastructure is extremely hard to replicate at speed.

 **AI Intelligence Moat**

Our AI models improve with every query, every review, every interaction. First-mover advantage in AI-powered local discovery in East Africa.

 THE PEOPLE

The Team & Realities

BizHub was built by an ambitious solo founder with deep local roots. I know the technology, and I know the streets.

Peter Agak

SOLE FOUNDER & CEO

Full-stack developer and local commerce expert. Single-handedly designed, architected, and deployed the entire BizHub platform completely solo utilizing AWS infrastructure. Has deep local roots having grown up in Thika.

 Risks & Mitigations

Risk: Verification Cost Sinks Margins

Physical verification is the trust moat, but scaling boots on the ground to 50+ towns carries heavy operational overhead.

Mitigation:

Transition to a hybrid model. Physical verification for the first 100 anchor businesses per town, then tech-driven verification (KRA PIN, live video) for the rest.

Risk: Google & Facebook Strike Back

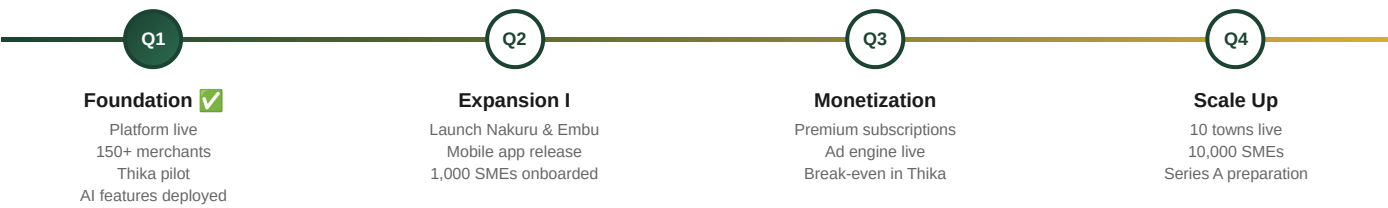

Mega-corporations could theoretically launch hyperlocal, verified tools aimed at African towns.

Mitigation:

Hyperlocal networks are hard for global giants to manage. By capturing merchants securely and locking them in via the Reverse Marketplace, we raise switching costs.

 ROADMAP & INVESTMENT

The Path to Market Dominance

WE ARE RAISING

\$500,000

Seeking a strategic partnership with Amazon (AWS + marketplace integration) alongside a \$500K pre-seed investment.

35% Product & Eng

STRATEGIC VALUE

Why Amazon Needs BizHub NOW

1. Africa is the Final Frontier

Africa is the fastest-growing consumer market globally (\$4.1T by 2030), yet Amazon has weak penetration in local offline commerce outside major capitals.

2. We Built What Amazon Needs

- A pre-verified network of local SMEs perfectly situated for last-mile logistics.
- Physical on-ground operations generating high-fidelity trust.
- A captive consumer base ready to transact online immediately.

The Bottom Line

We reduce Amazon's market entry cost and time by years.
